

rsa.
Regulatory Science Associates

RSA was founded in 2007 and aims to provide world-class safety science and regulatory solutions to a worldwide client base, mainly in the agrochemical and pharmaceutical industry sectors.

We are currently seeking to recruit experts in agrochemical human exposure science and in dietary and occupational risk assessment to join our existing team of safety scientists who provide support to active ingredient and product registrations in Europe for major agrochemical clients.

The successful candidate(s) will have an undergraduate degree in an appropriate life science and experience of conducting risk assessments and interpreting toxicology and exposure data, ideally with agrochemicals. An ability to engage effectively and work collaboratively with colleagues and clients, mainly through virtual communication, is essential. A postgraduate qualification in toxicology or risk assessment and experience in scientific project management would be desirable, although not essential.

If you would like to be considered for this position, on either a full or part time basis, please send a CV and covering letter to <mailto:Jen.buchanan@regulatoryscience.com>

Opportunities are available for both associates or employees, with options to work from home, either UK or EU based. Remuneration package will be commensurate with experience.
